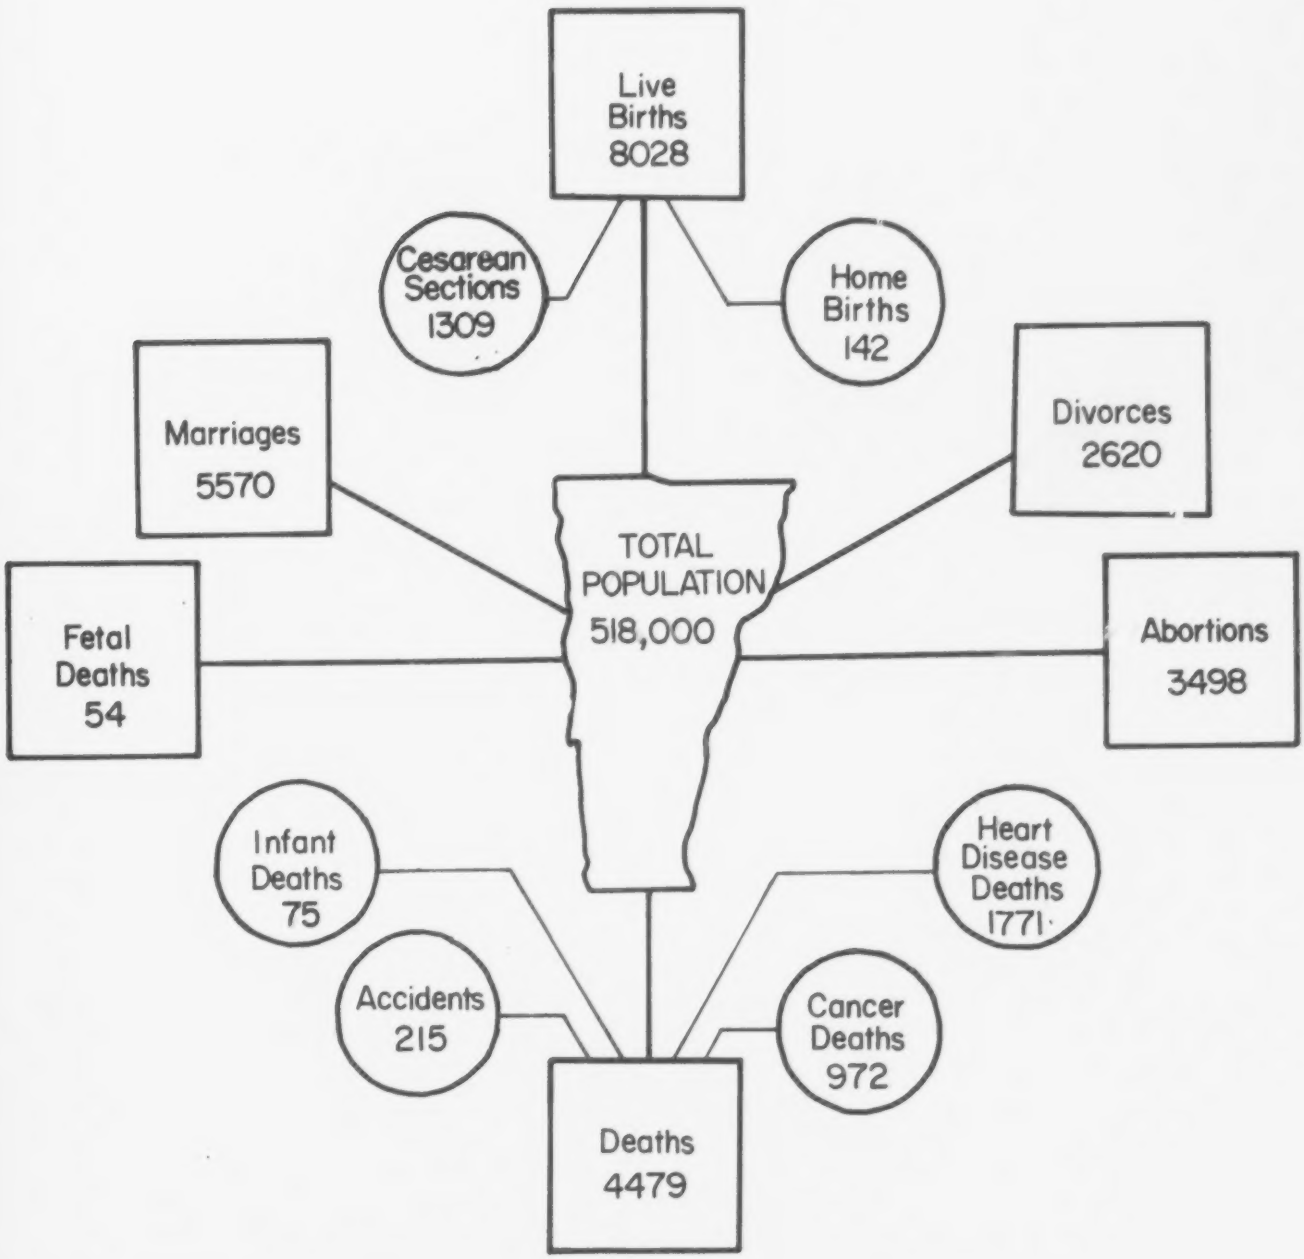
INTRODUCTION

figure 1

VERMONT VITAL EVENTS FOR 1982



Marriages, divorces and abortions are displayed above as occurrence data; all other vital events represent resident data.

INTRODUCTION

Title 18, section 5002 of the Vermont Statutes Annotated requires periodic publication of tables from the returns of births, deaths, fetal deaths, marriages and divorces. This report, which is the ninety-eighth in a series of publications begun in 1857, presents Vermont vital events for the year 1982.

THE VERMONT VITAL STATISTICS SYSTEM

Under Vermont statute, the Department of Health is responsible for operating the statewide system of Vital Statistics. Figure 2A presents an overview of this system. Birth and death certificates in Vermont are filled out by the attending physician and are filed with the clerk in the town of occurrence. Marriage certificates are filled out by the person solemnizing the marriage and are filed with the clerk who issued the marriage license (the town of residence of either the bride or groom, or if neither is a Vermont resident, a town clerk in the county where the marriage takes place). Divorce certificates are filled out by the plaintiff's attorney and are filed with the county clerk in the county in which the decree is granted. Copies of these certificates are forwarded to the Health Department monthly for statistical processing and permanent storage.

Reports of fetal death and induced termination of pregnancy are not legal documents in Vermont. These records are filled out by the attendant at the event and are sent directly to the Health Department. After processing, the reports are temporarily filed and are periodically destroyed.

Copies of certificates pertaining to events which occur to Vermonters outside the state are sent to the Health Department by the state in which the event occurred under the interstate exchange program for vital records. This program includes events affecting armed forces personnel stationed overseas. The Health Department is not typically informed of events occurring to the civilian population while out of the territorial United States and Canada.

Figure 2B portrays vital statistics information processing within the Department of Health. Upon receipt at the Health Department, the certificates are logged in by town, visually edited for completeness and internal consistencies and queried if omissions or inconsistencies are found. Since, under Vermont law, a certificate cannot be amended in the Health Department, if necessary, the appropriate person will be asked to file an amended certificate. Medical and demographic data is coded and the certificate is numbered and microfilmed. Infant deaths are matched with the corresponding birth certificate. Certificates are then passed from the vital records section to data processing.

THE VERMONT VITAL STATISTICS SYSTEM

A. OVERVIEW

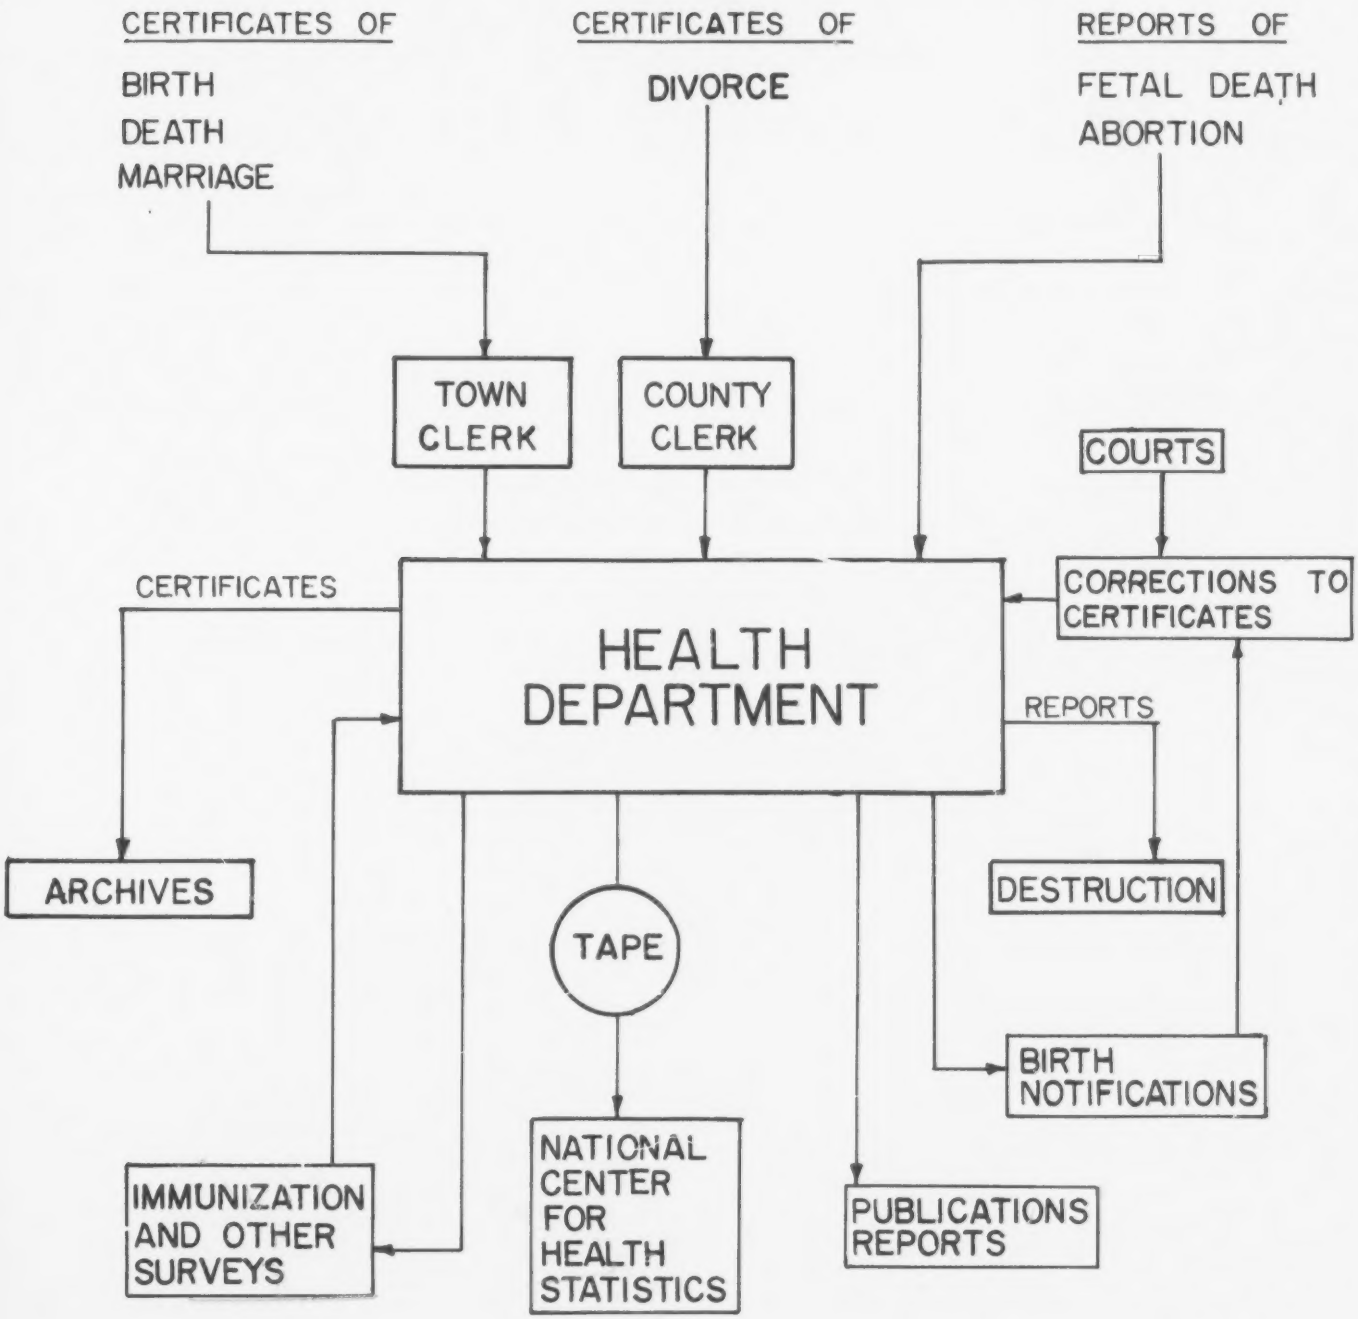

figure 2B

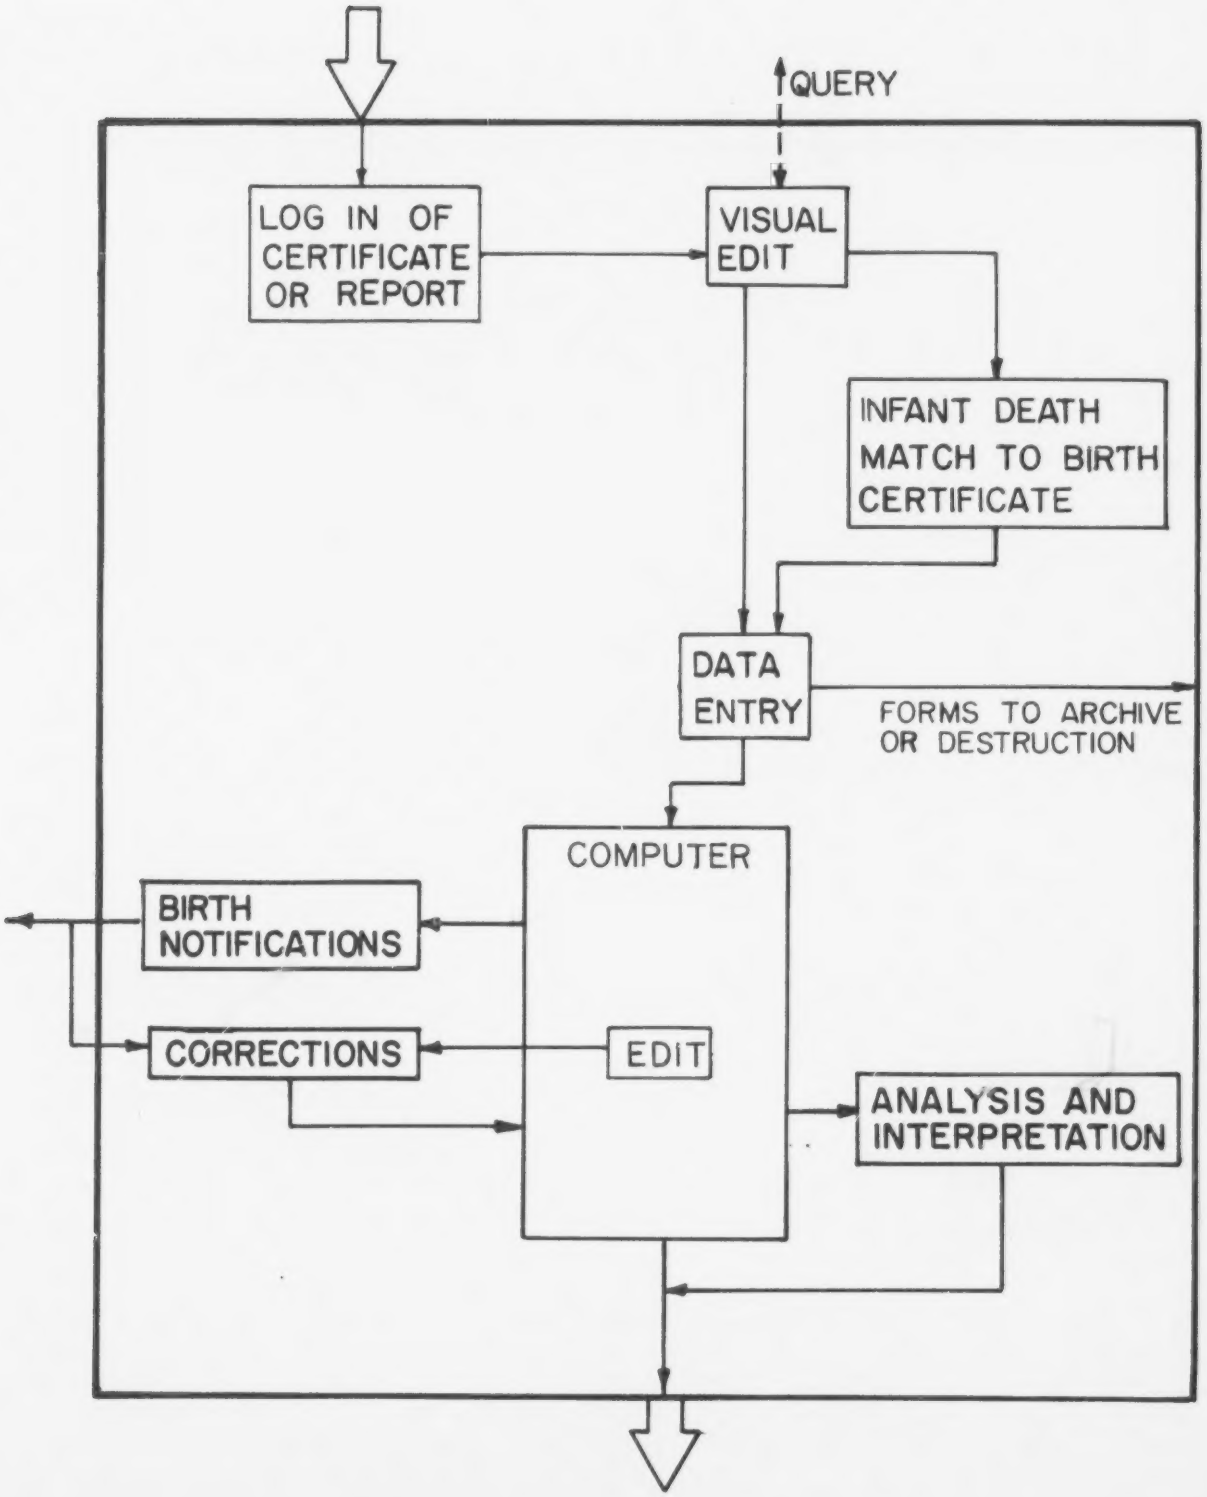
B. HEALTH DEPARTMENT COMPONENT



Basic Definitions

The following definitions apply throughout this report:

A LIVE BIRTH is the complete expulsion or extraction from its mother of product of conception, irrespective of the duration of pregnancy, which after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

A DEATH is the permanent desappearance of any evidence of life at any time after live birth.

A MARRIAGE is the legal union of persons of opposite sex.

A DIVORCE is the final legal dissolution of a marriage.

An ANNULMENT is the invalidation or voiding of a marriage which confers on the parties the status of never having been married to each other.

A reportable FETAL DEATH is a death prior to the complete expulsion or extraction from its mother of a product of conception, having passed through at least the 20th week of gestation or weighing more than 400 grams; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

An ABORTION is the purposeful interruption of pregnancy with the intention other than to produce a live-born infant or to remove a dead fetus.

A NEONATAL DEATH is a death occurring in the first 28 days of life.

An INFANT DEATH is a death occurring in the first year of life.

A PERINATAL DEATH is a fetal death or a death occurring in the first week of life.

A MATERNAL DEATH is the death of a woman from causes related to pregnancy.

WEEKS OF GESTATION is the number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

PLURALITY is the number of siblings born as a result of this pregnancy.

RESIDENCE. Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

OCCURRENCE. Place where the event actually occurred.

After the certificates are keyed and verified, the month's vital events, including the matched births and deaths, are loaded into the computer. The records are then subjected to a computerized edit which checks all fields for valid codes and inconsistencies as well as flagging suspiciously large or small values and certain improbable conditions, such as unusual age-sex-cause of death combinations. Any discrepancies are reconciled and the records are added to the master file. A copy of the months records is transmitted to the National Center for Health Statistics for inclusion in the national health data base. When the data is complete, annual tabulations, including those in this bulletin are produced.

POPULATION

All rates in this publication are based on estimates of the Vermont midyear 1982 population (Table 2) developed by the Division of Public Health Statistics. They are published in the Public Health Statistics Bulletin, October 1983.

RATES

Crude Birth Rate = $\frac{\text{No. of resident live births}}{\text{Total resident population (mid-year)}} \times 1000$

Fertility Rate = $\frac{\text{No. of resident live births}}{\text{Total resident female population (15-44)}} \times 1000$

Age-specific Fertility Rate = $\frac{\text{No. of resident live births to mothers in a specific age group}}{\text{Total female population in specific age group (mid-year)}} \times 1000$

Crude Death Rate = $\frac{\text{No. of resident deaths}}{\text{Total resident population (mid-year)}} \times 1000$

Age-specific Death Rate = $\frac{\text{No. of deaths in specific age group}}{\text{Total resident population in specific age group}} \times 1000$

Marriage Rate = $\frac{\text{No. of marriages}}{\text{Total resident population (mid-year)}} \times 1000$

Divorce Rate = $\frac{\text{No. of divorces and annulments}}{\text{Total resident population (mid-year)}} \times 1000$

Infant Death Rate = $\frac{\text{No. of resident infant deaths}}{\text{Total resident live births}} \times 1000$

Neonatal Death Rate = $\frac{\text{No. of resident neonatal deaths}}{\text{Total resident live births}} \times 1000$

Fetal Death Rate = $\frac{\text{No. of resident fetal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1000$

Perinatal Death Rate = $\frac{\text{No. of resident perinatal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1000$

Abortion Ratio = $\frac{\text{No. of resident abortions}}{\text{Total resident live births}} \times 1000$

Age adjusted rates:

Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. (In this bulletin, county rates are adjusted to the state population distribution.) The computation formula is:

$$\text{The sum of } \frac{\text{Age specific rate for each age group} \times \text{Standard population in that age group}}{\text{Total standard population}} \times 1000$$

SUMMARY STATISTICS

SUMMARY OF 1982 VITAL EVENTS

	Occurrence Number	Residence	
		Number	Rate
Births	7,766	8,028	15.5/1000 Population
Deaths	4,511	4,479	8.6/1000 Population
Natural Increase		3,549	6.8/1000 Population
Infant Deaths	67	75	9.3/1000 Live Births
Fetal Deaths	65	53	6.5/1000 Live Births and fetal deaths
Abortions	3,498	2,589*	322.5/1000 Live Births
Marriages	5,570		10.8/1000 Population**
Divorces	2,620		5.1/1000 Population**

Estimated midyear population: 518,000

*Does not include out of state occurrences

**Based on number of occurrences

SUMMARY STATISTICS

The 1982 rates for the major vital events, births, deaths, abortions, marriages and divorces, increased over the 1981 rates. The birth rate, which has been increasing gradually since 1976, was 15.5 births per 1000 population. The mortality rate, 8.6 per 1000 population represents a marginal increase over the 1981 rate, but is typical of those in recent years. Neither the infant death rate (9.3 deaths per 1000 live births) nor the fetal death rate (6.5 deaths per 1000 live births plus fetal deaths) represents a significant divergence from rates recorded in the late 1970's and early 1980's. The abortion ratio, 322.5 abortions per 1000 live births, is nearly identical to last year's ratio, 322.1. This follows a slight decline from 1980 to 1981. Both the marriage rate, 10.8 marriages per 1000 population, and the divorce rate, 5.1 divorces per 1000 population, increased over rates recorded in 1981.

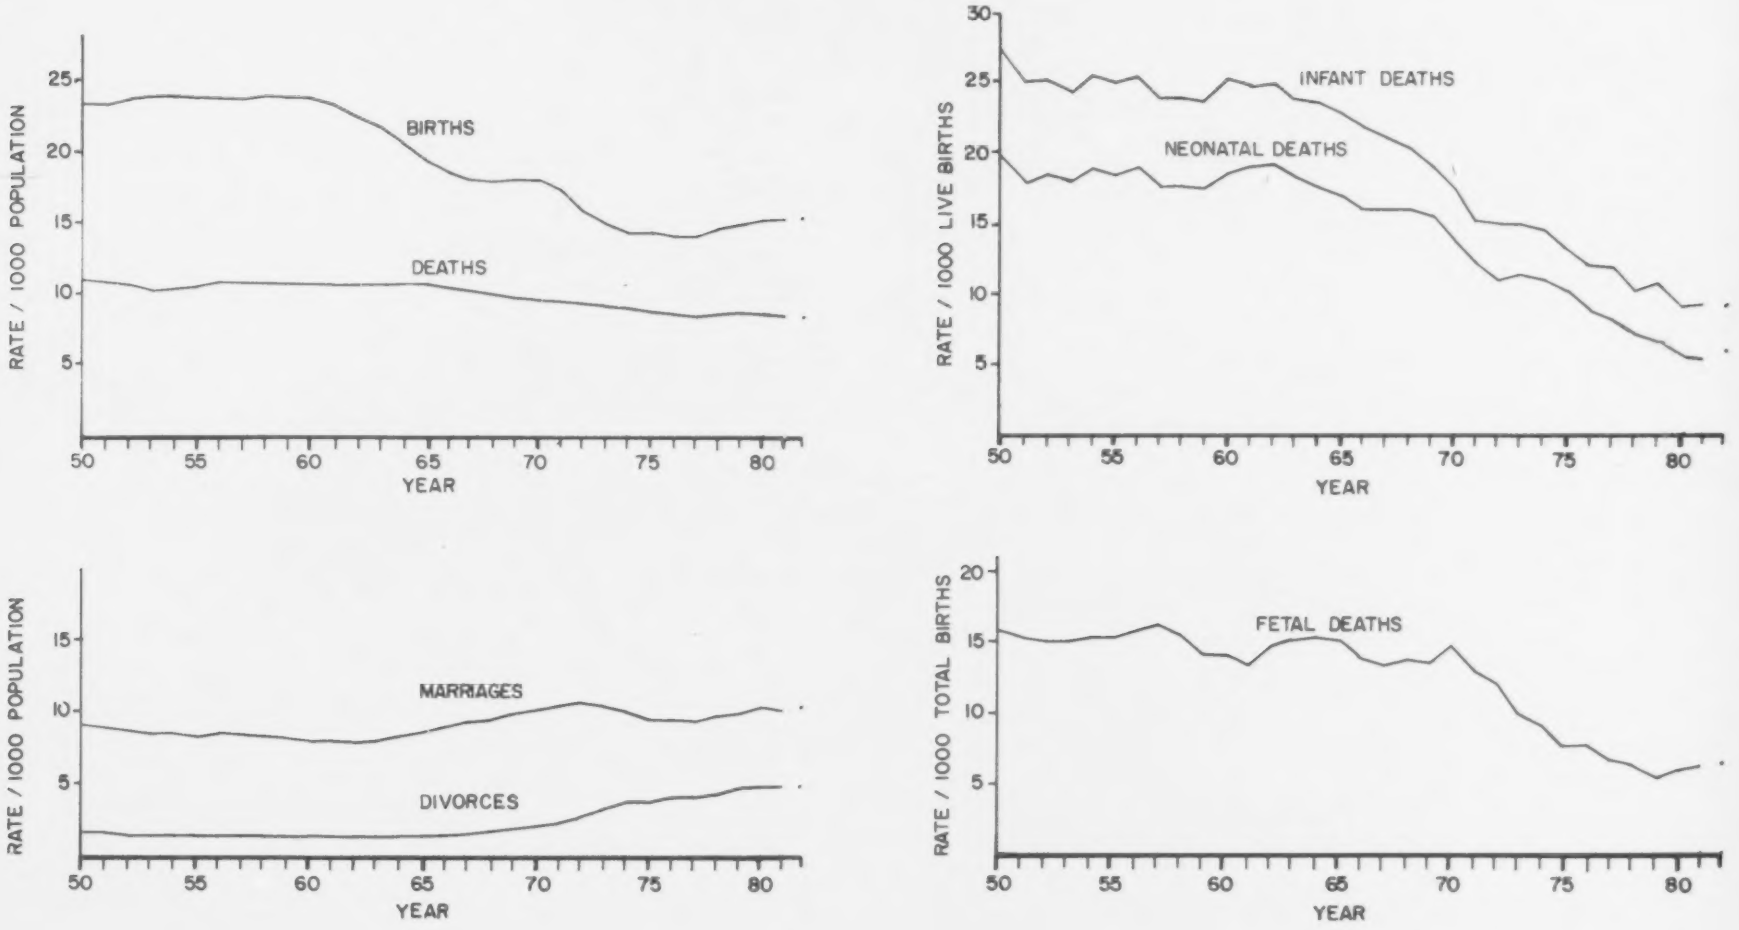
In general, 1982 Vermont vital event rates are comparable to provisional U.S. White rates. This year, Vermont marriage and divorce rates are identical to U.S. White, while historically, these Vermont rates have been slightly lower. Vermont birth rates have been slightly higher than U.S. White rates since the 1960's, while in recent years, Vermont has had lower death, infant death, and fetal death rates.

The 1982 population of Vermont is estimated to be 518,000 persons. This includes 265,686 females and 252,314 males. The most numerous age groups includes those of college age (15-19 and 20-24 years), as well as the baby boom generation (25-29 and 30-34 years).

Figure 3

SELECTED VITAL EVENT RATES, VERMONT, 1950 - 1982

THREE YEAR MOVING AVERAGES*



* THE MOVING AVERAGE FOR A GIVEN YEAR IS THE AVERAGE OF THE DATA FOR THAT YEAR AND THE 2 ADJACENT YEARS. NO AVERAGE IS CALCULATED FOR END YEARS. THIS TECHNIQUE ATTENUATES RANDOM VARIATION.

[2]Rate per 1,000 live births

[3]Rate per 1,000 live births and fetal deaths

[4]Rate per 10,000 live births

*The majority laws were changed, effective July 1, 1971, so that all 18 year old residents could marry without parental consent.

#Reporting requirements were changed and includes only those of 20 or more weeks gestation or weighing 400 or more grams.

**Data for these years is based on occurrence returns only. 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.

BIRTHS

The 8028 Vermont resident births which occurred in 1982 represents the largest number of births since 1970. The live birth rate, 15.5 births per 1000 population, has remained essentially unchanged over the past three years, due to increases in the state's population. The total fertility rate, live births per 1000 females aged 15 to 44 years, has been similar to recent years, and is much lower than rates of the 1960's and early 1970's. Age-specific fertility rates show increased fertility for mothers aged 30 to 34 years over the period 1980-82, but these rates are still notably below those of the 1960's. Little change is seen in the fertility of other groups over the past 3 years.

Overall, two-thirds of mothers are in their 20's, and 11 percent are teenagers. Fourteen percent have not completed high school, compared with 19 percent in 1977. The percentage who have had at least one year of education past high school graduation has increased from 37 percent to 42 percent over the past 5 years. This increase in the education level of mothers parallels that of the general population, and is beyond that explained by changes in age distribution.

Educational level had a significant influence on the month prenatal care began. Over half of mothers who had completed high school made their first prenatal visit by the end of the second month. In contrast, approximately one-third of mothers with less than a high school diploma began prenatal care in the first 2 months of pregnancy.

The average birth weight of all 1982 Vermont resident births was 3376 grams, approximately 7.5 pounds. Of all births, 5.9 percent weighed less than 2500 grams, with somewhat more female infants (6.5%) than males (5.2%) in this category. The percentage of births below 2500 grams has decreased over time, declining from 7.7 percent in 1960.

There has been a dramatic increase in the number of births attended by certified nurse-midwives over the past 5 years, from 54 births in 1978 to 399 births in 1982. Concomitant to the increase in number attended by certified nurse-midwives is an increase in the number of hospitals where these births are delivered. In 1978, certified nurse-midwives attended births at only one hospital, whereas they delivered babies at four Vermont hospitals by 1982.

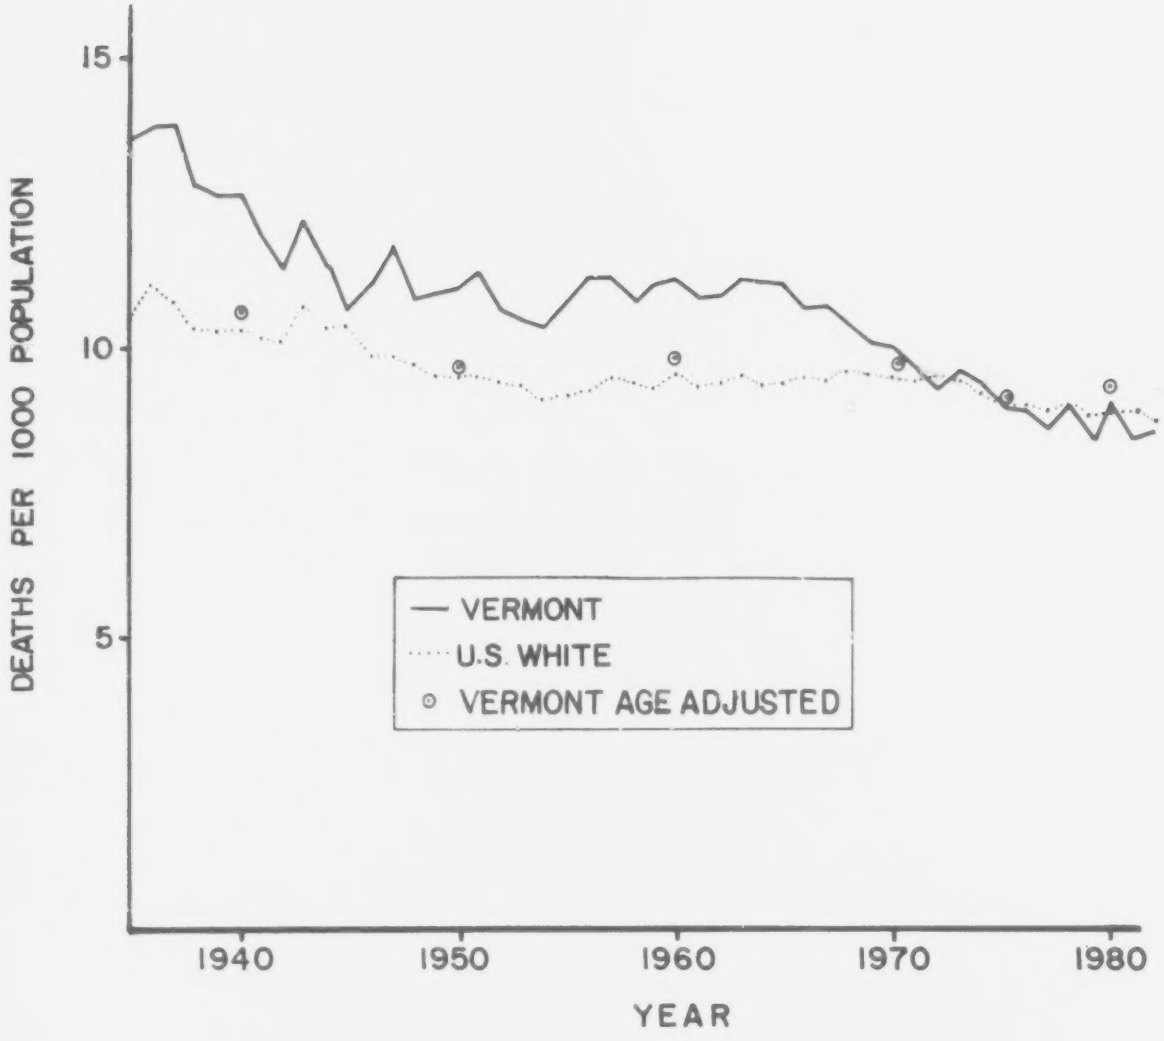
DEATHS

figure 6

VERMONT AND U.S. WHITE CRUDE DEATH RATES, 1935-1982



U.S. RATES FOR 1981 AND 1982 ARE ESTIMATES

SOURCE: VDH/PHS, NCHS

DEATHS

There were 4479 Vermont residents who died in 1982, yielding a crude mortality rate of 8.6 deaths per 1000 population. This rate represents a minor increase from that of 1981, and is comparable to Vermont mortality rates over the past 5 years. In addition, the sex-specific mortality rates of 9.4 deaths per 1000 males and 8.0 per 1000 females are nearly identical to that of the U.S. White population.

The total age-adjusted mortality rate did not vary appreciably according to county of residence. However, Grand Isle County did have a higher death rate for heart disease than the state average rates. There were no significant geographical trends in the age-adjusted malignant neoplasms mortality rates.

Overall, mortality rates due to the ten leading causes of death in Vermont were similar to those of recent years. Heart disease represented 39 percent of all resident deaths, malignant neoplasms represented 22 percent, and cerebrovascular disease (stroke) accounted for an additional 8 percent of Vermont deaths. Although the total accident rate for both sexes was comparable to previous years, Vermont males had the lowest total accident mortality rate and motor vehicle accident mortality rate in over 15 years.

Males in the late teenage years and early 20's have had the highest age-specific mortality rates from motor vehicle accidents, approximately 80-90 deaths per 100,000 male 16-24 year old population. Male motor vehicle accident mortality rates decrease with increasing age, reaching values of 20-30 per 100,000 for males over 34 years of age. The age-specific motor vehicle accident fatality rates for females are much lower than for males, attaining peak levels of only 20 deaths per 100,000 females aged 16-24 years.

In the past, Vermont mortality statistics have been based on a count of deaths with one cause assigned to each death. This "underlying cause" is defined as the disease or injury which initiated the train of morbid events leading directly or indirectly to death. The Vermont death certificate, however, provides room for the certifying physician to list all of the conditions, diseases and injuries present at the time of death.

The National Center for Health Statistics now supplies the Vermont Department of Health with an automated list of all the conditions noted on the Vermont death certificate. These new codes aid in the understanding of the overall morbid process and the role each disease plays in it. For example, we now have data on chronic conditions such as asthma, arthritis, alcoholism, diabetes, and bronchitis, which by themselves may not be fatal, but when combined with another disease, may greatly increase the risk of death.

One method of utilizing data on all mentioned conditions involves computing the number of deaths for which a given condition is mentioned, in concert with the number of deaths attributed to that condition (Table 39). For example, the ratio of the number of times cancer was mentioned on the death certificate divided by the number of deaths attributed to cancer is close to unity. This suggests that for deaths in which cancer is involved, cancer is frequently considered to be the underlying cause. Diabetes, on the other hand, has a ratio of mentioned to underlying of 4.32, indicating that diabetes was the underlying cause in one of every four deaths where diabetes was present at the time of death. Most of those persons for whom diabetes was mentioned but not as underlying died of heart disease. Other causes frequently listed on death certificates as other than the underlying cause include hypertension, atherosclerosis, pneumonia, chronic obstructive pulmonary disease, and renal failure.

A cross tabulation of nature of injury by manner of death from external causes is presented in Table 40. Most of the injuries associated with motor vehicle accident deaths are internal injuries, intracranial injuries and fractures, sprains, and dislocations. Non motor vehicle accident deaths recorded a greater variety of injuries, including those mentioned above as well as choking on a foreign body, burns, and toxic effects of carbon monoxide and other fumes. Suicides typically sustained head injuries or open wounds. Of all deaths with an external cause mentioned, the category of fractures, sprains and dislocations was the most common nature of injury, representing one quarter of all injuries.

*Cause of death is coded by the International Classification of Diseases, Adapted (ICDA). Deaths in 1952-57 were coded according to the 6th ICDA revision (ICDA-6), 1958-67 deaths according to ICDA-7, 1968-78 deaths according to ICDA-8, and 1979-82 deaths according to ICD-9. Although there is little difference between ICDA-6 and ICDA-7, significant changes were made in ICDA-8 and ICD-9. Therefore, code numbers for ICDA-7, ICDA-8 and ICD-9 are given in addition to comparability ratios which have been applied to earlier rates to make them comparable to the 1979-82 rates. (Ratios from "Monthly Vital Statistics Report", Volume 17, #8 Supplement, October 25, 1968, and Volume 28, #11 Supplement, February 29, 1980; DHEW, NCHS, Washington, D.C.).

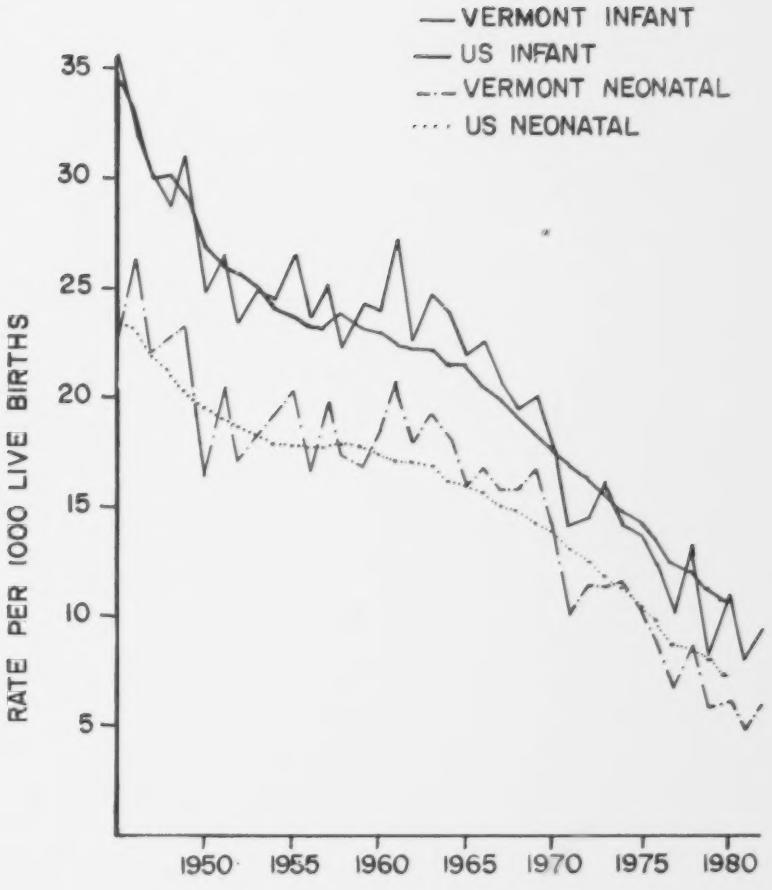
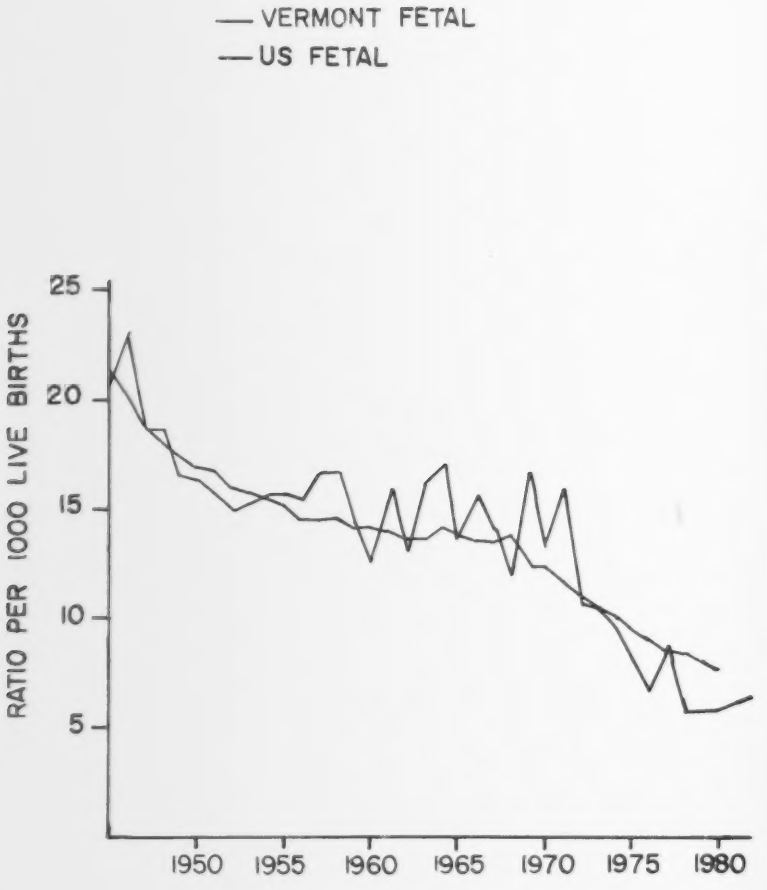
INFANT DEATHS, FETAL DEATHS, ABORTIONS

VERMONT AND US WHITE
INFANT AND NEONATAL MORTALITY RATES
AND FETAL MORTALITY RATIOS
1945-1982





U.S. DATA FOR 1981 AND 1982 WERE UNAVAILABLE AT TIME OF PUBLICATION

FETAL DEATHS, INFANT DEATHS, AND ABORTIONS

The decade of the 1970's saw consistent declines in the infant and fetal death rates. However, during the past three years, no particular downward trends have been observed. The 1982 rates, 9.3 infant deaths per 1000 live births and 6.5 fetal deaths per 1000 live births plus fetal deaths, are typical for this period.

Three factors, age of mother, weeks of gestation, and birth weight, are associated with the risk of fetal and infant death. Both young mothers (under 20) and older mothers (35 and over) have higher fetal and infant death rates than do mothers between 20 and 34 years. Not surprisingly, birth weight and weeks gestation are positively correlated ($r=0.49$, $p<.01$). Infant and fetal death rates tend to increase with decreasing birth weight, and to increase for preterm deliveries. For example, 56 percent of infants weighing less than 1000 grams (2.2 lbs.) at birth die in their first year of life, while 22 percent of those weighing between 1000 and 1499 grams, and only 5 percent of those weighing between 1500 and 2499 grams do not survive to one year of age. Less than one-half of one percent of infants born weighing 2500 grams or more died in their first year. Similar trends hold for the relationship between infant mortality and weeks gestation.

The number of abortions performed in Vermont in 1982, 3498, is an increase of 110 over the number performed in 1981. As a result of an increase in the number of births in Vermont, the ratio of abortions per 1000 live births was identical to the ratio recorded last year, 322 abortions per 1000 live births.

Women under 25 years obtained about two-thirds of all abortions performed in Vermont, and women under 20 received about 30 percent. In general, residents of other states receiving abortions in Vermont were slightly younger than Vermont residents receiving abortions. About two-thirds of all abortions were performed on unmarried women with no children. Only about 15 percent of women receiving abortions were married.

Over 99 percent of all abortions performed in Vermont terminated pregnancies of 14 weeks or less. About two-thirds of all abortions took place in a clinic and about two-thirds were suction curettages.

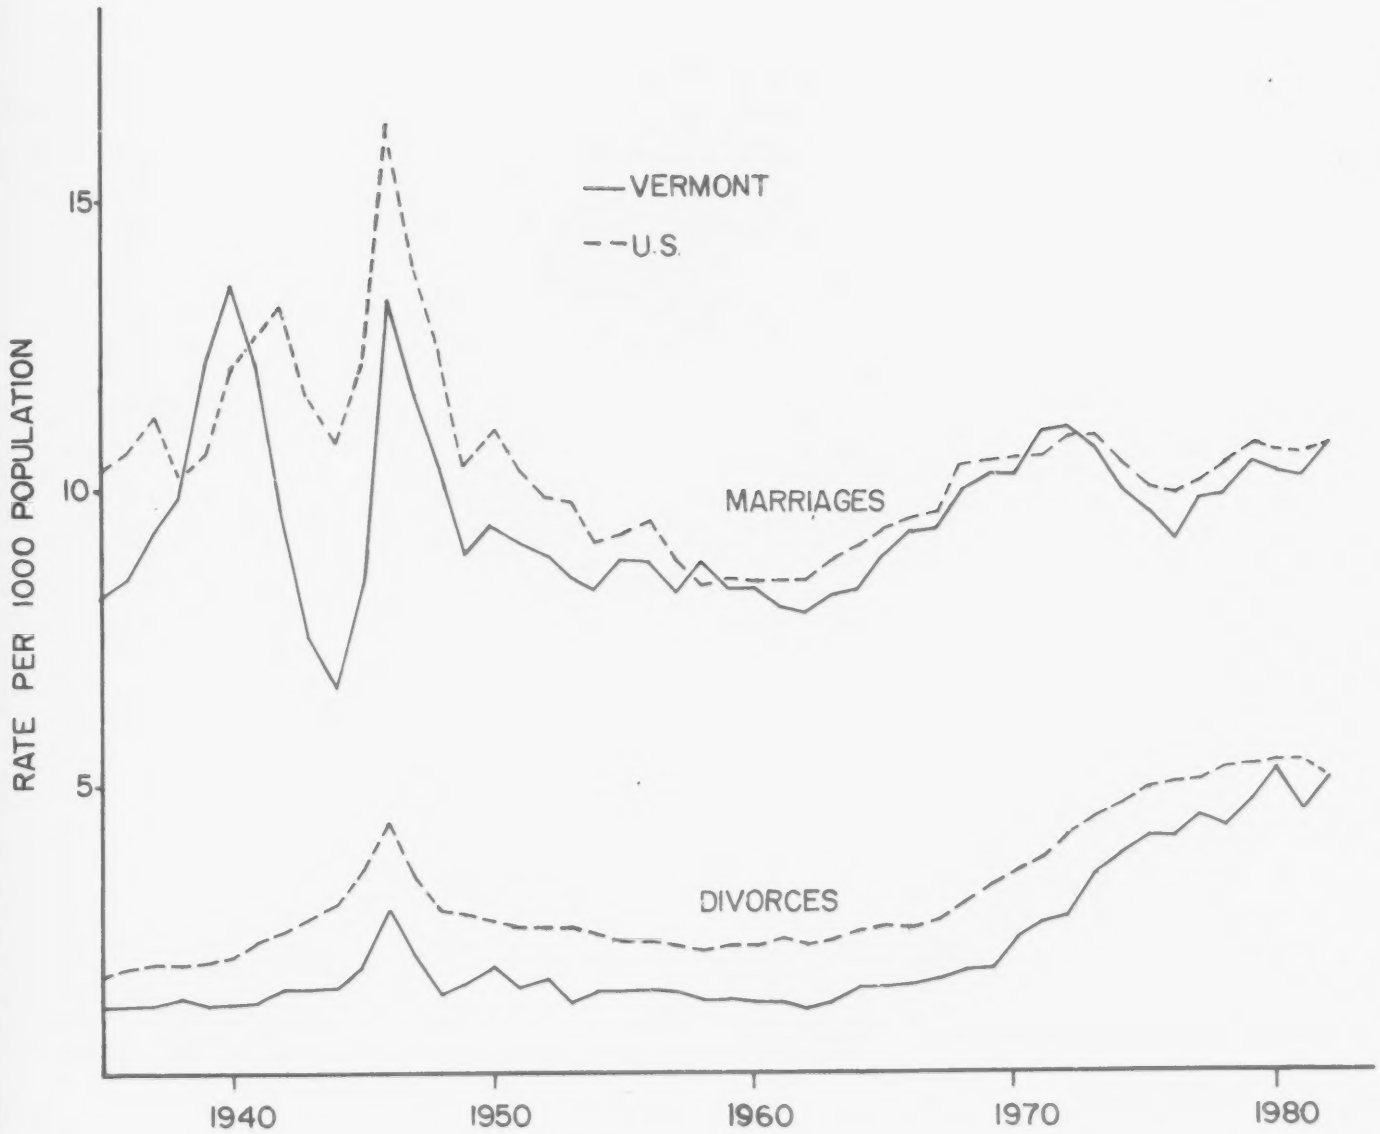
figure 12

MARRIAGE AND DIVORCE RATES
VERMONT AND U.S. 1935 - 1982



1981 AND 1982 U.S. DATA ARE PROVISIONAL

SOURCE: VDH/PHS

MARRIAGES AND DIVORCES

There were 10.8 marriages per 1000 population in Vermont in 1982. This rate is essentially the same as rates recorded over the past 6 years, but the number of marriages for 1982, 5570, is the largest number ever recorded in Vermont. Nearly 15 percent were marriages in which neither bride nor groom were Vermont residents. Residents of Massachusetts, New Hampshire, New York and Canada accounted for more than two-thirds of these marriages. In most counties, 80-90 percent of marriages were between partners who both resided in that county.

Almost thirteen percent of brides and fourteen percent of grooms had not completed high school, approximately the same percentages as in 1981. Forty-five percent of brides and forty-three percent of grooms had attended college. Grooms had a similar number of years education as brides in half of all marriages and had more education than their wives in 25 percent of marriages.

The age of grooms ranged from 16 to 90, similar to that of brides, 14 to 80 years of age. The mean age of all grooms was 30 years, which remained somewhat older than the mean age of brides, 27 years. Over the past fourteen years there has been an increasing percentage of marriages with older participants. The percentage of marriages in which the bride and groom were between 18 and 24 years of age has decreased by 24 percent for the bride and 36 percent for the groom. In contrast, the percentage of marriages of 25 to 34 year olds has increased by 133 percent for brides and 77 percent for grooms. This is due, in part, to the fact that the percentage of first marriages has been decreasing for over ten years as the percentage of remarriages increased. As expected, in 1982, the mean age of persons in first marriages, 23 years, was notably younger than in remarriages, where individuals had a mean age of approximately 40 years.

The 2620 divorces granted in Vermont in 1982, a rate of 5.1 per 1000 population, represents a 13 percent increase from the 1981 rate. This 1982 divorce rate is approximately the same as the 1980 rate, but does represent a 122 percent increase from the 1970 rate of 2.3. Grand Isle County had the lowest divorce rate in Vermont, 2.7 per 1000 population, less than half that of either Bennington or Windham Counties which had the highest rates of 6.1 per 1000 population.

The mean age of divorced husbands was 36 years in 1982 with the mean age of divorced wives being 33.5. Over the past decade and a half, the age of persons obtaining divorces has increased. For example, 30 percent of persons getting divorced during 1969 to 1971 were between the ages of 30 to 39 years, compared to approximately 40 percent from 1980 to 1982.

Mt. Ascutney Hospital	Windsor	Windsor
Northeast Vermont Regional Hospital	Caledonia	St. Johnsbury
Grace Cottage Hospital	Windham	Townshend
Veteran's Administration Center	Windsor	White River Jct.
Vermont State Hospital	Washington	Waterbury

APPENDIX B

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Shigellosis and amebiasis	004, 006	004, 006
Certain other intestinal infections	007 - 009	008, 009
Tuberculosis	010-018	010-019
Tuberculosis of respiratory system	010-012	010-012
Other tuberculosis	013-018	013-019
Whooping cough	033	033
Streptococcal sore throat, scarlatina and erysipelas	034-035	034
Meningococcal infection	036	036
Septicemia	038	038
Acute poliomyelitis	045	040-043
Measles	055	055
Viral hepatitis	070	070
Syphilis	090-097	090-097
All other infectious and parasitic diseases	001-003, 005, 020-032, 037,039-041, 046-054, 056-066, 071-088, 098-139	Remainder of 000-136
Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues	140-208	140-209
...of lip, oral cavity, and pharynx	140-149	140-149
... of digestive organs and peritoneum	150-159	150-159
...of respiratory and intrathoracic organs	160-165	160-163
...of breast	174-175	174
...of genital organs	179-187	180-187
...of urinary organs	188-189	188, 189
...of all other and unspecified sites	170-173, 190-199	170-173, 190-199
Leukemia	204-208	204-207
Other malignant neoplams of lymphatic and hematopoietic tissues	200-203	200-203, 208, 209
Benign neoplasms, carcinoma in situ, and neoplasms of uncertain behavior and of unspecified nature	210-239	210-239
Diabetes mellitus	250	250
Nutritional deficiencies	260-269	260-269
Anemias	280-285	280-285
Meningitis	320-322	320
Major cardiovascular diseases	390-448	390-448
Diseases of heart	390-398,402,404-429	390-398,402,404,410-429
Rheumatic fever & rheumatic heart disease	390-398	390-398
Hypertensive heart disease	402	402
Hypertensive heart and renal disease	404	404
Ischemic heart disease	410-414	410-413
Acute myocardial infarction	410	410
Other acute & subacute forms of ischemic heart disease	411	411
Angina pectoris	413	413
Old myocardial infarction & other forms of chronic ischemic heart disease	412, 414	412
Other diseases of endocardium	424	424, 428
All other forms of heart disease	415-423, 425-429	420-423, 425-427, 429

APPENDIX B

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Hypertension with or without renal disease	401, 403	400, 401, 403
Cerebrovascular diseases	430-438	430-438
Intracerebral & other intracranial hemorrhage	431-432	431
Cerebral thrombosis and unspecified occlusion of cerebral arteries	434.0, 434.9	433
Cerebral embolism	434.1	434
All other and late effects of cerebrovascular disease	430, 433, 435-438	430, 432, 435-438
Atherosclerosis	440	440
Other diseases of arteries, arterioles and capillaries	441-448	441-448
Acute bronchitis and bronchiolitis	466	466
Pneumonia and influenza	480-487	470-474, 480-486
Pneumonia	480-486	480-486
Influenza	487	470-474
Chronic obstructive pulmonary diseases (C.O.P.D.) & allied conditions	490-496	490-493, 519.3
Bronchitis, chronic and unspecified	490-491	490-491
Emphysema	492	492
Asthma	493	493
Other C.O.P.D. and allied conditions	494-496	519.3
Ulcer of stomach and duodenum	531-533	531-533
Appendicitis	540-543	540-543
Hernia of abdominal cavity and intestinal obstruction without mention of hernia	550-553, 560	550-553, 560
Chronic liver disease and cirrhosis	571	571
Cholelithiasis & other disorders of gallbladder	574-575	574, 575
Nephritis, nephrotic syndrome, and nephrosis	580-589	580-584
Acute glomerulonephritis & nephrotic syndrome	580-581	580, 581
Chronic glomerulonephritis, nephritis & nephropathy, not specified as acute or chronic and renal sclerosis, unspecified	582-583, 587	582-584
Renal failure, disorders resulting from impaired renal function, & small kidney of unknown cause	584-586, 588-589	582-584
Infections of kidney	590	590
Hyperplasia of prostate	600	600
Complications of pregnancy, childbirth and the puerperium	630-676	630-678
Pregnancy with abortive outcome	630-638	640-645
Other complications	640-676	630-639, 650-678
Congenital anomalies	740-759	740-759
Certain conditions originating in perinatal period	760-779	760-769.2,769.4-772, 774-778
Birth trauma, intrauterine hypoxia, birth asphyxia, and respiratory distress syndrome	767-769	764-768, 772, 776
Other conditions	760-766, 770-779	Remainder of 760-778
Symptoms, signs and ill-defined conditions	780-799	780-796
All other diseases	Residual	Residual
Accidents and adverse effects	E800-E949	E800-E949
Motor vehicle accidents	E810-E825	E810-E823
All other accidents & adverse effects	E800-E807, E826-E949	E800-E807, E825-E949
Suicide	E950-E959	E950-E959
Homicide and legal intervention	E960-E978	E960-E978
All other external causes	E980-E999	E980-E999

APPENDIX C

NATURE OF INJURY CLASSIFICATIONS

Nature of Injury	Category According to the International Classification of Diseases 9th Revision
Fractures, dislocations, and sprains and strains of joints and adjacent muscles	800-848
Intracranial injury, excluding those with skull fracture	850-854
Internal injury of chest, abdomen and pelvis	860-869
Open wound and injury to blood vessels	870-904
Late effects of injuries, poisonings, toxic effects and other external causes	905-909
Superficial injury, contusion and crushing injury	910-929
Effects of foreign body entering through orifice	930-939
Burns	940-949
Injury to nerves and spinal cord	950-957
Certain traumatic complications and unspecified injury	958-959
Poisoning by drugs, medicaments and biological substances	960-979
Toxic effects of substances chiefly nonmedical as to source	980-989
Other and unspecified effects of external causes, complications of surgical and medical care not elsewhere classified	990-999

APPENDIX D

STAFF OF THE DIVISION OF PUBLIC HEALTH STATISTICS

Karen P. Baron.....Computer Programmer Analyst

Mary T. Byrd.....Data Entry Operator

Robert W. Ciechanowicz.....Chief of Public Health Statistics Data Processing

Walter L. Cooley.....Population Statistician

Edward J. Costello.....Computer Programmer Analyst

Gilles Cote.....Computer Programmer Analyst

Pauline A. Dubuque.....Administrator, Vital Records

Mary Anne Freedman, M.A.....Director, Division of Public Health Statistics

Evelyn T. Jenkins.....Vital Records Clerk

David A. Jillson, Ph.D.....Senior Biostatistician

Steven J. Kappel.....Research & Statistics Analyst

Shelia R. Kennison.....Data Entry Operator

Rhonda Kost.....Computer Programmer Analyst

Kathleen A. LaFountaine.....Data Entry Operator

Louise M. McKenney.....Data Clerk

Debra W. Moffatt.....Typist

Pamela C. Noble-Ashikaga.....Research & Statistics Specialist

Linda R. Peake.....Computer Operator

Edna C. Webster.....Vital Records Specialist

Marilyn L. Wright.....Vital Records Clerk
